//done liberary force microtubers, in vitro-grown"
//note="Vector: pBluescript SK(-); Site 1: EcoRI; Site 2:
Xhol; Tissue supplied by Christian Bachem and Richard
Visser (Department of Plant Breeding, Wageningen
University, The Netherlands); sequencing by The Institute
for Genomic Research. The cSTA libraries will attempt to
capture the induction and initiation/initial growth of the
tuber in an in vitro system as described in Bachem et al.
(Plant Journal, 1996). Small microtubers develop from
axillary buds attached to stem explants when placed on a
high sucrose medium (10%). Visible morphological changes
occur synchronously at day five in the axillary buds
first library, cSTA (1-20) consists of axillary buds
harvested on days 1-3. This targets those genes involved
in induction of the microtubers. The following libraries,
cSTA (21-40) and cSTA (41-60), capture genes involved in
tuber initiation and outgrowth. This library is noted as
                                                                                                                                                                   Eukaryota, Viridiplantae; Streptophyta; Embryophyta; Tracheophyta; Bukaryota; Viridiplantae; Streptophyta; Eukaryota; Magnoliophyta; eudicotyledons; core eudicots; asterids; lamids, Solanales; Solanaceae; Solanum.

/clone=lb="popeato abjoic; stress cDNA library"
/note="vector: pCWNSport6.1; Site 1: EcoRi; Site 2: Not!;
supplier: Solanum tuberosum var. Kennebec plants were
grown from cuttings on a 16hr light/θ hr dark cycle at 25
C for 3-4 weeks. Abjoic stress conditions were applied to
four separate sets of plants. Set 1 involved saturation of
the soil with 150 mM NaCl and tissues were harvested at
following application of the salt stress (leaves: 2hr,
6hr, 12hr, 1d, 2d, and 4d; roots:2hr, 6hr, 12hr, and 2d).
Set 2 were grown under the standard conditions and then
were water stressed by withdrawal of further watering
applications. Drought stressed plants were harvested after
cessation of watering (leaves: 3d, 3d, and 3d, rootes:3d
and 5d). Set 3 were grown under the standard conditions
and then were cold stressed by placement at 4 C. Cold
stressed leaves were harvested at 2 hr, 6 hr, 12 hr, 1 d,
and 4d and roots were harvested at 2 hr, 6 hr, 12 hr, 1 d,
and 4d and roots were harvested at 2 hr, 6 hr, 12 hr, 1 d,
and 4d and heat-stressed roots were harvested at 6 hr,
12 hr, 1 d, and 4d. RNA was isolated from all tissues and
equal RNA from each tissue and stress was pooled to
construct the cDNA library. RNA sample." CK262102

On Oct 8, 1997 this sequence version replaced gi:2443866. We have determined that YAC YUPBH12 is chimaeric, and is comprised of two distinct genomic EcoRI fragments from chromosome I. This submission contains the sequence from the EcoRI site at position 1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    at

                                                                                                                                                                                                                                                                                                                                                 ઠ
                                                                                                                                                                                                                                                                                                                                                                                                                                              ઠ
                                                                                                                                                      The invention relates to identifying a stress condition to which a plant cell has been exposed, comprising: (a) contacting nucleic acid representative of expressed polynucleotides in the plant cell with an array or probes representative of the plant cell genome; and (b) detecting a profile of expressed polynucleotides in the plant cell characteristic of a stress response. The method is useful in the production of transgenic plants, cells and seeds and in producing plants with increased tolerance to abloric stress. The present sequence is that of an Arabidopsis thaliana stress regulated gene (ABZ12196-ABZ17574) used in methods of the invention. Note: The sequence data for this patent is not represented in the printed specification but is based on sequence information supplied to berwent by the European Patent Office
                                           Identifying a stress condition to which a plant cell has been exposed and producing plants with increased tolerance to these abiotic stresses.
                                                                                                               Claim 144; SEQ ID NO 1337; 577pp + Sequence Listing; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 2043 BP; 627 A; 507 C; 507 G; 402 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                  The present invention relates to novel environmental stress-responsive promoters (ADB23163-ADB22252) from Arabidopsis thaliana. The promoters are useful in constructing and breeding stress-resistant plants for applications in agriculture and horticulture. The present sequence was used to illustrate the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a number of isolated Arabidopsis thaliana cDNA sequences and their encoded proteins which are especially transcription factor related cDNA's and proteins. The isolated or recombinant plant transcription factor polyncleotides and polypeptides are useful in producing transgenic plants with commercially valuable properties, i.e. modified or altered desirable traits as compared to a reference plant, such as an alteration in a plant growth characteristic, e.g. growth rate,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New plant transcription factor polynucleotides and polypeptides, useful in producing transgenic plants with commercially valuable properties, such as an alteration in a plant growth characteristic, e.g. growth rate

germination rate of seeds, vigor of plants and seedlings, or leaf and flower senescence. Sequence information related to the polynucleotides and polypeptides can also be used in bioinformatic search methods. The transgenic plant is useful for growing a progeny plant from a parent plant. This sequence represents one of the cDNAs of the invention.

```
The invention describes a transgenic plant comprising a recombinant polynucleotide of any one of more than 500 nucleotide sequences fully defined in the specification or its complement. The method of the defined in the specification or its complement. The method of the chancies to be used to produced a plant having altered traits such as: enhanced tolerance to abiotic stress; glyphosphate tolerance; hormone sensitivity; disease resistance; sugar sensing; early or late flowering; altered flower structure, change in stem bifurcations, altered branching pattern, reduced apical dominance, reduced trichome density; lack of trichomes; reduced ectopic trichome development; altered trichome trichomes; increased root prowth; increased root hairs; altered seed development; altered cell proliferation or cell differentiation; rapid development; premakenture sensescence; increased necrosis; increase in seedling or plant size; decreased plant size; leaf morphology; seed morphology; seed biochemistry; increase in root anthocyanins; increase in plant can search methods. This sequence represents a plant transgenic plant, polynucleotides and polypeptides are useful in bioinformatic search methods. This sequence represents a plant transcription factor related polynucleotide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            311 ------AACAACAGCAACAATAGCAACAACAACAACAACAACAACAAAACACAAAA 358

The present invention relates to an isolated nucleic acid molecule encoding a cell proliferation-related polypeptide. The nucleic acid molecule and the encoded polypeptide, and methods are useful for modulating cell proliferation, senescence, differentiation, development, and stress response in plants, and for producing enhanced food crops. The present sequence represents a cell proliferation-related nucleic acid sequence. The present sequence is published separately from the main body of the specification as EPO data.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     243

```

The present invention relates to novel plant transcription factor proteins (1) and nucleotide sequences (II) (AboGista-AboGS778). The present can be used to produce transgenic plants, which overexpress (II), where the transgenic plant has an altered trait as compared to a concrete can be used to produce transgenic plants, which over plant comprises an altered trait selected from increased tolerance to ablotic stress, increased tolerance to cold, increased tolerance to conditions. Increased tolerance to cold, increased tolerance to cold, increased colerance to low nitrogen conditions, increased tolerance to cold, increased tolerance to low nitrogen conditions, increased tolerance to low nitrogen conditions, increased tolerance to low nitrogen conditions, increased tolerance to unitiple fungal pathogens, increased tolerance to succeed semantivity to AGC, altered sugar sensing, increased tolerance to succeed semantivity to AGC, altered sugar sensing, increased tolerance to succeed sensitivity to AGC, altered sugar sensing, increased tolerance to succeed sensitivity to AGC, altered sugar sensing, increased tolerance to succeed sensitivity to AGC, altered sugar sensing, increased tolerance to succeed sensitivity to AGC, altered succeed sensitivity, altered factoring altered stem morphology, altered vacular tissue structure, reduced fertility, altered forming, altered stem morphology, altered vacular tissue structure, reduced altered trichome structure, altered seed trichome structure, altered seed trichome structure, altered seed trichome structure, altered seed trichome structure, altered cell differentiation, altered cell proliferation, altered cell affected plants, dark altered cell proliferation, altered cell affected plants, dark calced plants, dark seed in the seed blomas; large seedlings, dwarfed plants, dark calced relations, altered seed seed concerns, altered seed ordered sead seconce, abnormal embryo development, altered seed ordered leaf prenyl lipid content, altered seed seed ordered leaf prenyl lipid c

Sequence 1971 BP; 667 A; 360 C; 451 G; 493 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               representative of expressed polynucleotides in the plant cell with an array or probes representative of the plant cell genome; and (b) detecting a profile of expressed polynucleotides in the plant cell with an detecting a profile of expressed polynucleotides in the plant cell production of transgenic plants. The method is useful in the production of transgenic plants, cells and seeds and in producing plants with increased tolerance to ablotic stress. The present sequence is that of an Arabidopsis thaliana stress regulated gene (ABZ12196-ABZ17574) used in methods of the invention. Note: The sequence data for this patent is not represented in the printed specification but is based on sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                   Identifying a stress condition to which a plant cell has been exposed and producing plants with increased tolerance to these abiotic stresses.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      54

The present sequence is a cDNA encoding Arabidopsis thaliana transcription factor homologue. The transcription factors are used to alter the structure and developmental characteristics of plants such as soybean, wheat, corn, potato, corton, rice, oilseed rape, sunflower, alfalfa, sugarcane, turf, banana, blackberry, blueberry, strawberry, raspberry, cartaloupe, cauliflower, cucumber, coffee, eggplant, grapes, mango, lettuce, honeydew, melon, onion, papaya, peppers, pineapple, spinach, squash, sweet corn, tobacco, tomato, peas, watermelon, rosaceous fruits and vegetable brassicas. The transcription factors are specifically useful for modifying traits associated with plant's pathogen tolerance such as alterations in cell wall composition, trichome number or structure, callose induction, phytoalexin induction, and alterations in the cell death response. Transgenic plants expressing these transcription factors are more tolerant to biotrophic or necrotrophic pathogens such as fund; bacteria, molliques, viruses, nematodes and parasitic higher plants. The transcription factors are also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        331 GAGCAACAAAACCGTCAC-------AACAACAACAATAACTCAACTTCAT 375

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a transgenic plant having recombinant polymucleotide (II) encoding polypeptide comprising at least 6 consecutive amino acids of a sequence chosen from the protain sequence appearing as ADG466603 - ADG46749 (every second sequence), where compared with same trait of another plant lacking recombinant polymucleotide alters a trait of the seed transgenic plant when compared with pame train of the seed transgenic plant when compared with pame trains of a colymucleotide. The proteins are transcription factor-like proteins. Also included are altering (M1) a trait associated with seed having altered trains. Also included are altering (M1) a trait associated with seed having altered trains and included are altering (M3) a trait associated with a plant's seed (comprising transforming the plant with (II) and selecting the transformed plant), altering (M3) a trait associated with a plant's seed (comprising a recomprising the plant with a recombinant polymucleotide comprising least 18 consecutive nucleotides of a sequence comparising least 18 consecutive nucleotides of a sequence comprising least 18 consecutive nucleotides of plan) altering (M4) a plant's trait (involving providing the plant) altering (M4) a plant's trait (involving providing the plant) and altering and transforming a database sequence. Comparing the plant of altering a trait (involving providing a test polymucleotide detailed above, selecting a database sequence in the plant) and altering a plant to alter a trait of the hybridising test polymucleotide detailed above at low stringency and transforming the hybridising test polymucleotide detailed above at low stringency and transforming the hybridising test polymucleotide detailed above at low stringency and transforming the hybridising test polymucleotide in a plant to altering a trait associated with a plant's seed. The method (M3) is useful for altering a trait of the last one gene of a plant. The method (M4) is useful for altering a plant strait of the second or plant size, stress
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel transgenic plant having recombinant polynucleotide encoding polypeptide that alters trait of transgenic plant when compared with same trait of another plant lacking recombinant polynucleotide.
                                                                                                                                                                                                                                                                                                                                                                                                                Pineda O;

The invention relates to a number of isolated Arabidopsis thaliana cDNA sequences and their encoded proteins which are especially transcription factor related boths's and proteins. The isolated or recombinant plant transcription factor polynucleotides and polypeptides are useful in producing transgenic plants with commercially valuable properties, i.e. modified or alteration with commercially valuable properties, i.e. such as an alteration in a plant growth characteristic, e.g. growth rate, germination rate of seeds, vigor of plants and seedlings, or leaf and polypeptides can also be used in bioinformatic search methods. The transgenic plant is useful for growing a progeny plant from a parent plant. This sequence represents one of the cDNAs of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              316 AIGITATTACCAAATCATCAT---CAAGGTTTTGCTTTCACCGACGAAAACACTATGCAG 432
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New plant transcription factor polynucleotides and polypeptides, useful in producing transgenic plants with commercially valuable properties, such as an alteration in a plant growth characteristic, e.g. growth rate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  54
